# Final Project

Yuehann Xiao 4/24/2018

#### Introduction

The reason that I wish to do this topic is because recently more and more school shootings begin to exist. It happened without any preparation and many students and faculties have been killed by the shooter. From my perspective, it is an important social issue that everyone need to pay attention to in order to have a stable society in the future. What I did in this Final Project Word Cloud for real time data Bar plot The Top 10 words in the word cloud Sentiment Analysis and Pie Chart for real time data Comparison Word cloud for data from 2012 to now Comparison between top 10 words in teh word cloud from 2012 to now Time Series on video related with school shootings

```

According to this word cloud, people basically commented through three aspects. The main perspective is an intense emotion toward the shooting, which they talk about the words like "gun", "shooting" and "kill" a lot. gun. Besides that, they also express the sympathy to the children with words like "bad" and "sad". The last aspect is judgemental emotions towards the shooter and their attitude toward these tragedies, which they talked about "judge", "police", and "shooter". This frequency of words is predictable because expect the video that is the news, the video with most clike in the CNN is parents and teachers push for change after school shooting, so that is why the comments metioned a lot of gun and gun control

# show the top 10 words in the word cloud and their frequency

# **Most frequent words**

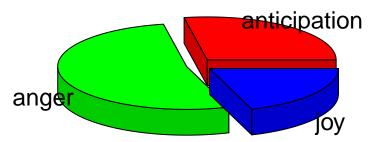

In order for more clear undersing about the word cloud, I did a barplot to directly show the frequency of the top 10 words. From this bar plot we can notice that besides any emotional words, the gun has been mentioned the most which indicates that people are begin to pay attention on the gun using.

# Sentiment Analysis

Pie Chart for sentimental analysis

Real Time: Pie Chart of sentiment analysis

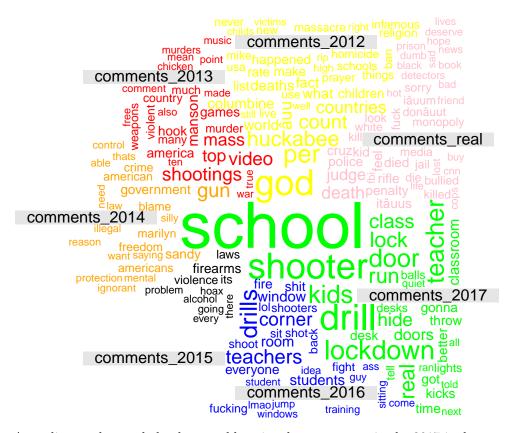

Although the postive word "like" has been mentioned 200 times, but "like" in this content doesn't really have any meaning. we could conclude that, as we expected, most comments are negative and intense. We could also conclude from the pie chart that anger has occupy a large proption of the comments However,

one thing that needs to notice is that people's anticipations or suggestions on the current situation have not been mentioned a lot in the comment but this might attribute to that the word "gun", which implies the gun control is include in the anger sentiment.

#### **Historical Data**

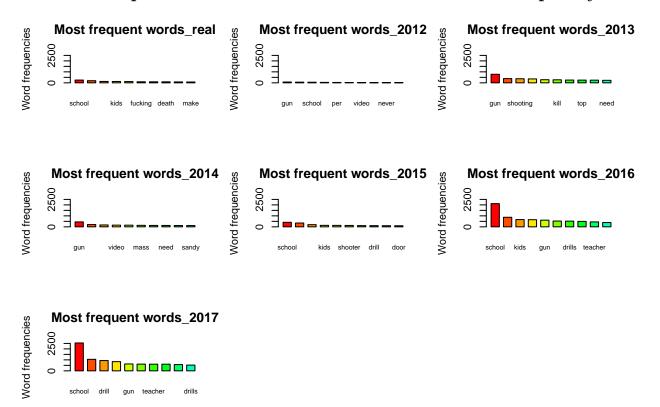

### text cleaning

## Comparison Word Cloud

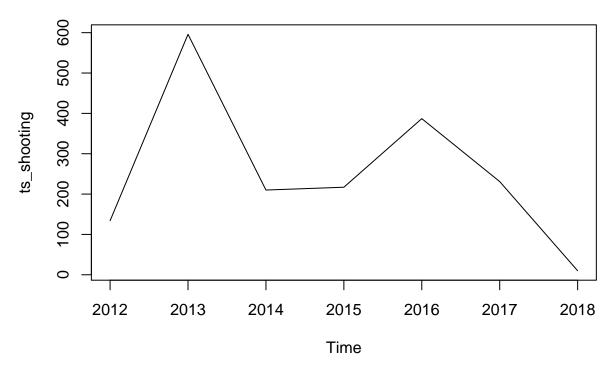

According to the word cloud we could notice that comments in the 2017 is the most, despite that we only include part of the comments in 2018. We could conjecuted that school shootings become more and more serious and importnat among people around 2017, so there are more comments begin from 2017. However, we still should addmitted that 2017 has the most comments might also due to other circumstances. Most words in the word cloud are negative words, although they contain the same emotions, we could detect that the main topic toward shool shootings among different years are slight different. real time daya is more focus on the judgement toward the shooter, with words like judge, penalty. 2017's comments are mainly around school Moreover, 2014's comments have mentioned about words like government and crime.

## show the top 10 words in the word cloud and their frequency

According to these graphs, although different years are having different most frequent words, we could clearly see that the word "gun" has been highly mentioned in the 2012, 2013, 2014, 2015, and 2018, which is the real time data. Although in 2016 and 2017 the word "gun" has not been mentioned as the most frequent word, it is still in the rank of the top ten mentioned words. This indicates that as the school shooting happening, the most comments, besides the expression of sympathy to the children, would be the eagserness of the gun control or things related to gun. It is a continuous topic from 2012 to 2018 that people keep dicussing and debating about. the real time data is only from 04/01 till 04/22, so it has smaller amount of words compare to the rest.2012 also has small amount of words because it is long time ago and people might not be that active online to comment during 2012

# Time Series on video related with school shootings

According to the plots, we could see that 2013 there is a shapr increase in the 2013 about the videos that related with school shootings. According to the data in the past, I guess that this is because the number of school shootings is doubled from 2012 and 2013, so there were large amount of attention on this issue so the number of videos increase in the youtube. 2014 and 2015 have similar number of videos about shool shootings and this might also because. number of school shootings in 2014 and 2014 are similar. The number of videos about shool shootings is increasing from 2016 and 2017 because the number of school shootings also decreased. However, the number of videos about school shootings in 2018 are decreasing because this is only part of the data in 2018. Since the number of shool shootings has already reached 17 cases in 2018, I predicted that the number of videos about school shootings would also increase compare to previews years.
